

## Customer Product Information

### Sonnenschein GF 12 070 V substituted by GF 12 076 V

GNB Industrial Power, a division of Exide Technologies, announces the substitution of the Sonnenschein GF 12 070 V block battery by the new Sonnenschein battery GF 12 076 V, which is commercially available since January 2012. This change is part of our continuous improvement process to keep the performance and quality of our products up to date.

The battery housing dimensions and the terminal alignment of the GF 12 076 V corresponds with the former GF 12 070 V type, while the capacity and performance were significantly increased. The data sheet and drawings of the new GF 12 076 V are already available.

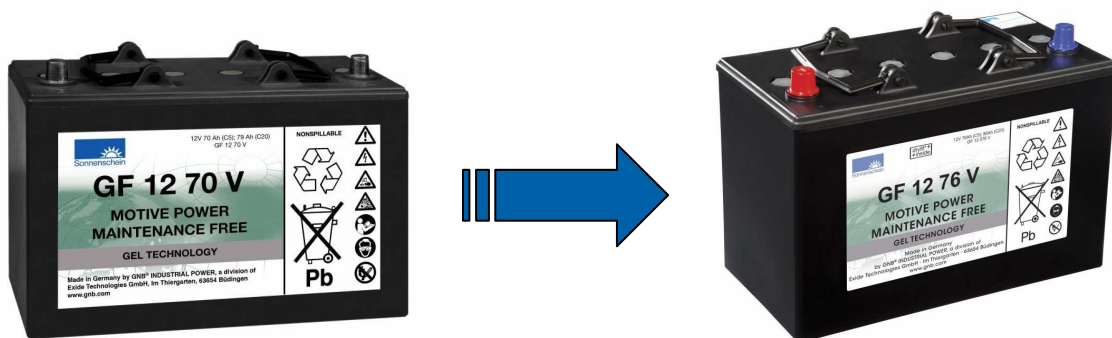

Fig. 1: GF 12 070 V & GF 12 076 V

From June 2012 on the transition period starts, where the old GF 12 070 V will be available for replacement business and for the customers, who have not finished yet their qualification process for the new GF 12 076 V only. This transition period will end in December 2012 with the stop of the GF 12 070 V production.
